Shaswata Bhattacharya

AI TRAINER · SPEAKER · LLM RESEARCHER

Lecturer, Department of Computer Science & Engineering, Daffodil International University

PROFESSIONAL STATEMENT

I am a Lecturer in Computer Science and Engineering at Daffodil International University, where I teach Artificial Intelligence and Computer Vision. My work connects three sides of AI: research on making large language models more efficient, hands-on model training through Reinforcement Learning from Human Feedback (RLHF), and practical training for the people who use these tools. I have co-authored research on memory-efficient long-context inference for LLMs, trained frontier models on software engineering tasks through Scale AI's Outlier platform, and led AI sessions for engineers and school science teachers. My aim is to help professionals and educators use generative AI confidently, critically and well.

CURRENT POSITION

Lecturer
Department of CSE
Daffodil International University

COURSES TAUGHT

- Artificial Intelligence
- Computer Vision
- Software Architecture & Design Patterns

CORE AREAS

- Large language models
- RLHF & model evaluation
- Generative AI for productivity
- AI in teaching & assessment

EDUCATION

Stanford University Online via Coursera

- Supervised Machine Learning: Regression and Classification
- Advanced Learning Algorithms
- Unsupervised Learning, Recommenders, Reinforcement Learning

AI TRAINING & SPEAKING

AI Trainer

Titas Gas Engineers AI Training Seminar

Trained practising engineers to put generative AI to work in three areas:

- **AI content generation** with Google Vids and Gemini
- **AI-assisted development** with Bubble AI and Claude Code
- **AI personal assistants** built with Gemini Gems

Speaker

National School Science Teachers' Conference

Session: Developing AI-Based Assessment Tools and Lesson Planning

Showed science teachers how to design assessments and plan lessons with AI chatbots, Kahoot!, Google Vids and MagicSchool AI.

INDUSTRY EXPERIENCE

AI Trainer (Software Engineer)

Scale Labs AI · Outlier platform · Freelance

Contributed to the RLHF process that makes frontier AI models more accurate, safe and aligned with human values:

- Evaluated AI-generated outputs on software engineering tasks for correctness and quality
- Wrote prompts to probe and strengthen model reasoning on programming problems
- Reviewed and corrected model-written code to produce high-quality training signal
- Performed data annotation used to train and refine models

RESEARCH

QEvict: Recoverable Quantized KV Eviction for Attention-Drift-Robust Long-Context Decoding

Co-author · arXiv:2608.05326 [cs.LG], 2026

A three-tier KV-cache scheme that compresses, rather than deletes, mid-importance context so an LLM can recover it when attention shifts during long-context decoding.

LLM EXPERTISE

LLM Inference Efficiency

KV-cache management, eviction policies and quantization for memory-efficient long-context decoding.

Attention Dynamics

Tracking how attention shifts during decoding and designing cache policies that stay robust to that drift.

RLHF & Model Evaluation

Evaluating outputs, writing prompts and correcting code to align frontier models with human preferences.

AI for Software Engineering

Training models on coding tasks and building with AI-assisted tools such as Claude Code and Bubble AI.

Applied Generative AI

Content generation with Gemini and Google Vids; custom AI assistants built with Gemini Gems.

ML Foundations

Supervised, unsupervised and reinforcement learning and recommender systems, taught through AI and Computer Vision courses.

TOOLS & PLATFORMS

Generative AI & Assistants	Gemini · Gemini Gems · Claude · AI chatbots
AI Development & Design	Claude Code · Bubble AI · Figma AI
AI Content & Video	Google Vids
Teaching & Assessment	MagicSchool AI · Kahoot! · Mentimeter · Google Forms & Sheets
Model Training (RLHF)	Outlier (Scale AI)
